Technical Properties
Natural Rubber Latex Protein: A Concomitant Manufacturing Material
Manufacturing Material Requirements
Production Protein Tests
Building, Equipment and Environment
Cleaning and Sanitation
Different Equipment
Die Swell and Wall Slip Behaviour of Natural Rubber
Die Swell
Wall Slip
Procedure
Crafting of Vinyl Monomers onto Natural Rubber
Formation of Graft Polymer
Procedure
Effect of Initiator Concentration
Effect of Temperature
Effect of Reaction Medium
Competitive Products

BASIC CONCEPTS OF SYNTHETIC RUBBER

Introduction
Basic about the Production of SR
Monomers for SR Production
Some Basics about polymerisation
Emulsion Polymerisation
Ionic Polymerisation
Coordination Polymerisation or Metal Complex Polymerisation
Solution Polymerisation
Suspension Polymerisation
Some Fundamentals about Polyaddition and polycondensation Reactions
Structure of Polymers and the Determination of Structure
Repeat Unit Structure of Polymer Chains
Molecular Weight and Molecular Weight Distribution
Linearity Branching
Monomer Sequence in Co-polymers

STYRENE BUTADIENE RUBBER

Introduction
Manufacture of SBR
E-SBR (Cold Rubber)
OE-E-SBR, Carbon Black Masterbatch
Hot Rubber
L-SBR
Structure of SBR and its Influence on Properties
L-SBR with Higher 1,2 Content
Random L-SBR
Segmented L-SBR
Tri-block L-SBR
Comparison of Solution and Emulsion SBRs
Compounding of SBR
Blends
Protective Agents
Fillers
Softeners
Factices
Resins
Process Aids
Processing of SBR Properties of SBR Vulcanisates
Properties of E-SBR Vulcanisates
Mechanical Properties
Dynamic Properties Ageing Resistance, and Abrasion Resistance
Electrical Properties
Resistance to Fluids
Properties of L-SBR Vulcanisates
Vulcanisates from L-SBR with a Random Distribution of Styrene
Vulcanisates from L-SBR with a Blocky Monomer Distribution
L-SBR with SBS Triblocks
Properties of Vulcanisates from OE-SBR and Black Masterbatches
OE-SBR (Oil Extended SBR)
Carbon Black Masterbatches
Uses of SBR
E-SBR
Random L-SBR
Blocky L-SBR
Thermoplastic SBR
Styrenic Block Co-Polymer Compounds
Applications
High Temperature TPE Application
High Clarity TPE Application
High Flow Injection Moulding
Over-Moulding/Two-Shot Moulding
Competitive Products

POLYBUTADIENE, POLYCHLOROPRENE AND POLYISOPRENE RUBBERS

Introduction
Polybutadiene
Manufacture of Polybutadiene (BR)
Ti-BR
Co-BR
Ni-BR
Nd-BR
Li-BR
Alfin-rubber
Structure of BR and its Influence on Properties
Macro-structure
Micro-structure
Compounding of ER
Blends
Vulcanising Agents
Protective Agents
Fillers and Plasticisers of Softeners
Processing of BR
Properties of BR Vulcanisates
Mechanical Properties
Dynamic and Ageing Properties
Traction
Uses of BR
Tyres
Technical Rubber Goods
Liquid Reactive BR Grades
Impact Modifiers for Plastics
Competitive Products
Polychloroprene Rubber (CR)
Compound Design
Manufacture of Polychloroprene (CR)
BUTYL AND NITRILE RUBBER

Introduction
Manufacture of Butyl Rubber (IIR)
Structure of IIR and its Influence on Properties
Macro structure
Unsaturation
Stabilisers
Compounding of IIR
IMMISCELLANEOUS RUBBERS

Introduction
Acrylates
Manufacture of Acrylic Rubber (ACM)
Structure of ACM and its Influence on Properties
Influence of Acrylate
Co-Monomers
Saturation
Compounding of ACM
Blends
Vulcanising Agents
Stabilisers
Fillers
Softeners
Process Aids
Properties of ACM Vulcanisates
Mechanical Properties
Ageing heat and Ozone Resistance
Swelling Resistance, Resistance to Chemicals
Low Temperature Flexibility
Uses of ACM
Competitive products
Ethylene/Acrylate Copolymers (EAM)
Chlorinated Polyethylene (CM)
Manufacture of CM
Structure of CM and its Influence on Properties
Compounding of CM
Blends
Vulcanising Agents
Stabilisers and Protective Agents
Fillers
Softeners
Process Aids
Processing of CM
Properties of CM Vulcanisates
Uses of CM
Competitive product
Chlorosulphonated Polyethylene
Manufacture of CSM
Structure of CSM and its Influence on Properties
Compounding of CSM
Vulcanising Chemicals
Antioxidants
Fillers, Plasticisers
Processing of CSM
Properties of CSM Vulcanisates
Use of CSM
Competitive Products
Polynorbornene (PNR) Structure of Properties
Compounding
Processing
Properties of Vulcanisates
Uses of PNR
Other Polymers
Special Butadiene Co-polymers
Vinylpyridine Rubber
Piperylene Rubber
Special Isoprene Co-polymers
Dimethylbutadiene Polymers (Methyl Rubber)
Special Polymers from Ringopening Polymerisations
Trans polybutadiene (TPA)
Trans polyoctenamer (TOR)
Alkylpolysulphide Rubbers (ASR)
Cross-Linkable Polyethylene (X-LPE)
Recently Developed Novel Elastomers
Polypyrophosphazene Rubber
Propylene Oxide Rubber (PO and GPO)
Polysulphides Rubber (TM)
Manufacture of TM
Structure of TM and its Influence on Properties
Influence of Monomers
End Groups
Molecular Weight
Sulphur Content
Compounding of TM
Vulcanising Agents
Fillers
Softeners
Process Aids
Processing of TM
Properties of TM Vulcanisates
Use of TM
Hot vulcanisable TM
Competitive products
Polyester and Polyether Rubber (OT)
Paraplex (07)
Norepol
Polyesters Based on Polyethylene Terephthalate and Polyethylene Glycol (Polyetheresters) (TPE-E)
Polyether Amides (TPE-A)
Competitive Products
Nitrosopruoro Rubbers

**LATEX PRODUCT MANUFACTURING TECHNOLOGY**

Introduction
Production and Testing of Latex Concentrate
Natural Rubber Latex
Synthetic Rubber Latex
Principles of Latex Compounding
Stabilisers
Vulcanisation System
Anti-degradive system
Fillers
Processing Additives
Gelling System
Pigments
Dipped Product Manufacture
Straight Dipping
Coagulant Dipping
Heat-Sensitive Dipping
Nitrile Latex-A Speciality Latex
Composition and Types of Nitrile Latex
Manufacturing of Latex
Application
Elastomeric Thread production
Stage 1: Latex Compound Preparation
Stage-2 Latex Extrusion
Stage 3: Drying and Vulcanisation
Stage 4: Finishing
Latex Foam Rubber
Processes Used in the Manufacture of Latex Foam
Carpet Backing Applications
Latex Binders
Rubberised Hair and Coir
Leatherboard and Fibre Board
Paper
Non woven Fabric
Latex Adhesives
Miscellaneous Latex Applications
Latex Cement Mixtures
Bitumen Mixes
Rubber Films
Latex Tubing
Latex Casting
Textile Uses

**FOAM PRODUCTS MANUFACTURING TECHNOLOGY**

Introduction
Processes for Foam Manufacture
Batch Process
Continuous Foaming Process
Talalay Process
Compound Design and Production of Foam Through the Dunlop Process
Gelling Agents
Formulations of Foam Rubber Based on Polychloroprene (Neoprene) Latices
Principles of Gelation
Delayed-Action Gelling Systems
Mechanism of Delayed Action Gelling by the Fluoro Complexes
Gelling Properties of Special Latices
Physical Characteristics of Gelling Defects Occurring in Foam Production and Remedial Measures
Testing and Quality Control of Foam
Indentation Hardness Index
Compression Set
Colour
Odour
Flexing Test
Ageing Test
Metallic Impurities
Environment Friendly Expandable Graphite A New Kind of Flame Retardant for Rubber Latex Foam
Expandable Graphite
Mechanism of Expansion
Expandable Graphite Work as a Flame Retardant
Exploring the Need
Selection of Effective Flame Retardant EG on the basis of Expansion
Materials and Methods
Test Methods
Preparation of Foam
Discussion

**PLASTICISERS, FACTICE AND BLOWING AGENTS**

Introduction
Plasticisers and Processing Aids
Classification
Mineral Oil Plasticisers
Paraffines and Ceresine
Cumarone and Indene Resins
Petroleum Distillation Residues
Fatty Acids, Fatty Acid Derivatives, process Aids
Fatty Acids
Metallic Soaps
Fatty Acids Esters and Fatty Alcohol
Pentaerythritol Tetraestearate
Emulsion Plasticisers
Polyethylene Glycol Fatty Alcohol Ethers
Animla and Vegetable Fats, Oils and Resins
Raw Wool Fat (Lanolin)
Fat Emulsions
Vegetable (Plant) Oils
Tall Oil
Animal Glue
Rosins
Abietic Acid
Coal Tar Pitch
Zewa Resins
Synthetic Plasticisers
Ether Plasticisers
Polyether and Polyether Thioethers
Thioether Esters
Ester Plasticisers
Phthalic Acid Esters
Adipic Acid and Sebacic Acid Esters
Trimellitates
Phosphoric Acid Esters
Other Ester Plasticisers
Chlorinated Hydrocarbons
Polycondensation and Polymerisation Products
Polyester of Adipic Acid Sebacic Acids and 1,2-Propyleneglycol
Alkyd Resins
Polymerisation Products from Croton Aldehyde
Liquid BR, SBR, NBR and EPDM
Tackifiers
Factice
Use and Properties
Advantages
Selection
Influence on Properties
Application Areas
Oxygen Factice
Isocyanate Factice
Specialty Factices
Liquid Sulphur or Sulphurchloride Factices
Blowing Agents
Inorganic blowing Agents
Organic Blowing Agents
AzA Compounds
Diazoamino compounds
Azonitrile
Azodicarbonamide (ADC)
Hydrazine Derivatives
Benzenesulphohydrazide (BSH)
Benzene 1-3 disulphohydrazide
Diphenyloxide 4,4 disulphohydrazide
p-Toluenesulphonic Acid Hydrazide
N-Nitroso Compounds
N,N Dinitrosopentamethylenetetramine (DNPT)
N,N' Dimethyl-N,N' Dinitrosophthalamide
Comparison of Important Blowing Agents

MOULDING AND FINISHING OF RUBBER COMPONENTS

Introduction
Blank Preparation
Blank Heating
Water Baths and Ovens
High Frequency and Microwave heating
Compression Moulding
Compression Clamp Moulding
Transfer Moulding
Within Mould Transfer
Transfer Press Moulding
Flashless Moulding
Injection Moulding
Moulding Shrinkage
Basic Principle
Determination of the Degree of Shrinkage
Mould Jurication
Materials for Special Effects
Mould Release Agents
Permanents Release Agents
Semi-Permanent Release Systems
Curing Cycles Achievable without Cleaning any Mould
Mould Cleaning
Finishing or Rubber Components
Flash and Spew Removal
Hand Trimming
Machine Trimming (Roller Trim)
Buffing
Low Temperature Tumbling
Punching
Grinding
Shot Blasting
Painting and Lacquering
Polyurethane Lacquer

HOSE TECHNOLOGY

Introduction
High Pressure Hydraulic Hose
Wire Braid Hoses
Spiral Hoses
Hot Water Washing Hose
Water Blast Hose
Thermoplastic Hydraulic Hose
Automotive Hose
Coolant Hoses
Power Steering Hoses
Fuel Hoses
Air Brake and Vacuum Brake Hose
Brake Hoses
Turbocharger Hose
Oil Cooler Hoses
Industrial Hose
Air, Water and Welding Hose
Steam Hose

RUBBER SPORTS GOODS MANUFACTURING TECHNOLOGY

Introduction
Golf Balls
Specification
Wound Golf balls
Golf Ball Centres
Thread and Winding
Cover Moulding
Finishing
Nonwound Golf Balls
Solid Balls
Two Piece Balls
Golf Ball Moulds
Tennis Balls
Specification
Modern Manufacturing Technology
Half shell Moulding
Core Manufacturing
Melton Cloth
Core Covering
Covered Ball Moulding
Testing and Marking
Future Developments
Squash Balls
Specifications
ISRF Ball (softball)
USSRA Ball (hardball)
Squash Ball Manufacture
Table Tennis Bat Rubbers

CABLE TECHNOLOGY

Introduction
Constructional Elements of Polymer Insulated Cables
Metallic Conductors
Polymeric Materials for Cable Insulation
Crosslinkable Polyethylene (XLPE)
Ethylene Propylene Rubber (EPR)
Silicone Rubber
Protective Sheaths
Thermoplastic Sheaths
Polyamide (PA) and polyurethane (PU) Elastomer Sheath
Amour
Electrical Screening
Semiconducting Shields
Metallic Screening
Designation of Cables
Voltage Designation
Additional Symbols for Cables
Cable Design
Current Carrying capacity and Selection of Conductor Cross sectional Area
Electrical Stresses and Insulation Thickness
Dielectric Properties
Compound Design
Manufacturing Techniques
Conductor Forming: Copper Wire Drawing and Annealing
Extrusion
Curing processes
Batch Curing
Continuous Curing
Mitsubishi Dainichi Continuous Vulcanisation (MDCV) Long Land Die Process
Liquid Curing
Infrared Curing
Special Purpose Elastomeric Cables
Survival (FS) Cables
Silicone Rubber
Insulated FS Cables
Mica/Glass and EPR Insulated FS Cables
Radiation Resistant Cables

RUBBER TO METAL BONDING COMPONENTS

Introduction
Materials
Elastomers
Metals and Other Rigid Substrates
Manufacturing Methods
Metal Preparation
RUBBER-COVERED ROLLS

Introduction
Design of Rubber Rolls and Choice of Materials
Chemical Resistance
Solvent Swelling
Chemical Attack
Heat Resistance
Physical Properties
Hardness and Thickness of Rubber
Economic Factors
Process of Rubber Roll Manufacturing
Preparation of Core and Rubber to - Metal Bonding
Forming of Rubber Covering
Curing
Allowance for Core
Allowance for Ebonite
Allowance for Rubber Covering
Grinding and Finishing
Surface Treatment
Special Comments
Dimensional Standards
Crown
Static Balance
Dynamic Balance
Kinematic Balance
Speciality Rubbers
Industrial Rolls
Paper Mills Rolls
Steel Mill Rolls
Printing Rolls
Appropriate Strength
Resistance to Oils and Solvents
Resistance to Glaze
Correct Dimensional Accuracy
Tanning Industry Rolls
Rolls for Plastic Industry
Polyethylene Extrusion and Lamination
Polyethylene Printing
PVC Processing
Textile Mill Rolls
Rolls for Foodstuff Industry
Other Applications

SEALING TECHNOLOGY

Introduction
Physical and Chemical Considerations
Selection of Elastomer
Sealing Configurations
O-ring
The Operating Environment
Friction
Wetting Phenomenon
Lewis Acid-Base Considerations
Fillers
Environmental Considerations
Elastomer Interactions
Liquid-Elastomer Interactions

Dynamic Properties of Rubber Resin Mixtures
Test Methods

TEST METHODS IN RUBBER INDUSTRY

Introduction
Standardisation in Various Countries
U.S.A.
Great Britain
Germany
Other Countries
Part-1, Natural Rubber Latex
Physical Tests
Density
Total Solids
Dry Rubber Content (DRC)
Non Rubber Solids
Sludge
Viscosity
Surface Tension
Mechanical Stability
KOH Number
VFA Number
Nitrogen
Total Ash
Metallic Constituents
Boric Acid
Part-II Synthetic Latices
Bound Styrene Content
Total Bound Styrene for Styrene Reinforced SBR
Bond Acrylonitrile Content
Part-III Test Methods in Rubber Industry Natural Rubber (Raw)
Chemical Tests
Volatile Matter
Dirt
Ash
Solvent Extract
Nitrogen
Copper
Manganese
Iron
Physical Properties
Viscosity by the Shearing Disc Viscometer
Rapid Plasticity of Raw Rubber and Unvulcanised Compounded Rubber
Plasticity Retention Index (PRI)
Colour
Part IV-Test Methods in Rubber Industry (Raw Synthetic Elastomers)
Moisture
Ash
Determination of Organic Acid Soap and Solvent Extract
Determination of Bound Styrene Content
Acrylonitrile Butadiene Rubber
Volatile Matter
Solvent Extract
Organic Acid
Soap
Ash
Aerylo nitrile content
Volatile Matter
Ash
Butadiene Rubber
Volatile Matter
Ash
Determination of 2,6-di-tert-butyl14-methyl phenol
Determination of Micro-structure
Determination of Unsaturation
Curing Characteristics of Natural and Synthetic Elastomers
Rubber Mixed with Vulcanising Agent
Uniformity in Natural Rubber
Styrene Butadiene Rubber Emulsion Polymerised General Purpose Types
Styrene-Butadiene Rubber (SBR) Oil Extended non-pigmented, Emulsion polymerised, General Purpose, 1700 Series B.S. 3650-1976
Raw Chloroprene
Raw Chloroprene
Raw ISO-Buteneisoprene Rubber (IIR of Buty) B.S. 4470-1980
Raw Non-oil Extended Isoprene Rubber Vulcanisation Characteristics of B.S. 5474-1977
Reclaim Rubber -IS 7490-1974
Part V-Test Methods on Compounded and Vulcanised Elastomers
Tensile Stress Strain Properties
Determination of Tension
Tear Resistance
Ply Separation
Cut Growth
Hardness
Methods for Curved Surfaces
Hysteresis Loss
Rubber Deterioration Surface Cracking
Resistance to Ozone Cracking Under Statioconditions
Abrasion Resistance
Swelling in Oil,
Rubber Deterioration by Heat and Oxygen
Oxygen Pressure Method
Rubber to Metal Bond Strength
Extraction Methods for Vulcanised Rubber BS
Chloroform Extract
Alcoholic Potash Extract
Determination of Rubber (Polymer)
Natural Rubber
Acrylo Nitrile Rubber
Chloroprene polymers
Determination of Sulphur
Extractable Sulphur
Total Sulphur
Rubber Combined Sulphur
Determination of Ash and Zinc Oxide
Zinc Oxide
Determination of Carbon Black
Electrical Tests
Surface Resistivity of Insulating Soft Vulcanised Rubber and Ebonite
Permittivity and Power Factor
Power Factor
Determination of Electric Strength of Insulating Soft Vulcanised Rubber and Ebonite
Determination of Plastic Yield of Ebonite
Impact Strength of Ebonite
Some Useful Data
Conversion of Tensile Strength
Sulphur
Tetra methyl Thiuram Disulphide (TMTD)

RECYCLING OF WASTES FROM RUBBERS AND PLASTICS

Introduction
Materials
Thermo Plastic Polymers
Thermoset Polymers
Rubbers
Natural Rubber
Synthetic Rubbers
Compounding Ingredients
